## EXPERIENCE

### SB Digital Agency

Web Developer Intern | Los Angeles, CA | April 2018 - Present

Marketing agency that provides a month-to-month, a-la-carte model of business solutions.

- Assisting in the development and maintenance of the WordPress based website which includes adding features with Javascript, PHP, and HTML/CSS, performing SEO optimization, debugging, and researching and installing new plugins

### HackSC Junior

Organizer – Head of Marketing | Los Angeles, CA | Sept 2017 - Present

Hackathon that fosters computer science principles for young students through an intensive one-day programming challenge.

- Responsible for rebranding and revamping the HackSC Junior website, extending social media presence, managing advertising materials, and recruiting high schoolers and middle schoolers with a minority focus

### YouTube

Content Creator | 2012-2016

Launched and operated a limited liability corporation and partnered with the largest entertainment network on the platform.

- Developed branding expertise, marketing strategies, and SEO techniques to generate over five million unique web hits
- Managed monetized content and established proficiency with cross-platform post-production software

## PROJECTS

### Notekeeper – *Full-Stack Web Application*

*Vue.js*

- Notebook application with fully integrated user authentication and real-time database using Firebase
- Implemented state management with Vuex
- Created with Vue.js on the front-end, Node.js / Express on the backend

### Recipe Finder – *Web Application*

*React*

- Food finder application that allows a user to enter any ingredient or dish and store their favorite recipes
- Implemented state management with Redux
- Utilized the Recipe Puppy API

### Web Search Engine – *C++ Project*

*C++*

- Built a simple web search engine from scratch
- Implemented a web crawler which retrieves all pages from the web and parses through user queries

### The Social Network – *C++ Project*

*C++*

- Social network model application allowing users to be added, friend connections made, etc.
- Implemented a Breadth-First Search algorithm for computing shortest paths, friend suggestions, and disjointed user sets
- Handled a user database using classes and file I/O techniques
